### Debate Kit: Pandemic Prevention Were all groups treated fairly during the pandemic?

A structured practice debate on a controversial topic. The different 'rounds' of the debate help students think through the issues and reconsider their opinions. The structure also shows them how to build a discussion and back up their opinions with facts.

You can use all eight characters, or fewer, as you wish.

The minimum is the four essential characters (in bold).

#### **Characters**

- Dave Saunders Secondary Teacher
- Leigh Jackson Politician
- Andor Vajda Social Worker
- Catriona Glas GP

- Nabila Goswami PPE supplier
- Sadik El Safi 16 year old
- Chloe Mornington Nursery teacher
- Gemma James Mother of 13 year old

#### **Facilitation tips**

- Ensure pupils know there is no right or wrong answer.
- Be observant of ones who want to speak and are not getting a chance.
- Encourage students to give a reason for their opinions.

Designed for KS4 but can be used with ages 11-18.

For groups who may need extra support you can put the following prompt sentences upon the board:

"I think ...... were treated unfairly because ..."

"I think ...... is the most important point to think about."

The issues in this debate could be sensitive for many students because of the impact of the pandemic and the measures implemented to control it. We have supplied additional notes for teachers to use alongside the kit to ensure the wellbeing of their students.

### Learning notes

### Learning objectives:

- To practise discussing and debating issues and expressing an opinion
- To improve key employability skills of listening and speaking

#### Other learning outcomes:

- Consider social, ethical and factual issues in an integrated way
- Think about different points of view
- Learn to back up opinions with facts

#### **Curriculum points covered:**

#### Thinking scientifically

- Evaluating the implications of technological applications of science
- Developing an argument
- Reflecting on modern developments in science

#### **Substantive**

 Consider social, economic and technical issues around public health and pandemic control.

"Particularly like the format plus the accuracy of the scientific information"

#### Nabila Goswami PPE supplier

I distribute nitrile gloves to hospitals and labs where people need them to stay protected. I took this job during the pandemic because I really wanted to help. The PPE shortages scared me, especially because there are a lot of people from minoritised ethnicities in high risk frontline health jobs, and they can catch COVID more easily and worse than others. Bangladeshi people are high on the list – which upsets me because my family are Bangladeshi. These people need our gloves the most.

Fact: The UK government makes public health decisions for England. Scotland, Wales and Northern Ireland make their own decisions, including when to buy PPE and how to distribute it.

Issue: People from minoritised ethnicities are disproportionately affected by COVID-19.

Question: Why do racial differences in COVID-19 severity almost disappear when occupation, socioeconomic status, age, sex, and existing conditions are taken into account?

#### Leigh Jackson Politician

I don't think it's helpful to point fingers now. We made hard decisions in an

emergency. Italy prioritised people most likely to survive when they got to hospital and let them have the ventilators. I think we were fairer - we tried for herd immunity and keeping rates low with lockdowns. We also tried to protect the economy and working people's livelihoods. We knew it would take at least a year to develop a vaccine and that the healthcare system couldn't cope if everyone caught it at once.

Fact: Even with restrictions and vaccines, by December 2021, over 10 million people in the UK had had COVID, and 145,000 had died from it.

Issue: Slowing down the spread "flattened the curve" to stop the health service being overwhelmed and give everyone who needed it access to a ventilator.

Question: Did slowing down the spread just lengthen the pandemic restrictions impacting the economy, our mental health, and exhausting medical staff?

### Andor Vajda Social Worker

My caseload doubled with the pandemic I don't think the effects were by age, but by income. People on lower pay were more likely to do jobs that they couldn't do from home, and be exposed to COVID at work. When schools closed, people had to give up their jobs most of them women. Without savings, unexpected changes are very stressful. People were getting evicted. Stress also aggravates domestic violence - and, unseen behind closed doors, incidences ballooned.

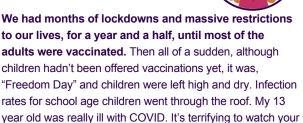

Fact: 1 in 3 adults who said they couldn't afford a large unexpected expense had depressive symptoms in early 2021. That's three times higher than average.

**Issue:** There was a 7% recorded increase in domestic violence due to the isolation of lockdown. Those without economic freedom are more likely to be victims.

Question: Should the government have made (or paid) landlords to let people stay in their homes if they lost their income in the pandemic?

### Gemma James Mother of 13 year old

Fact: The Pfizer vaccine was approved for use in 12-17 year olds in May 2021 and Denmark, France and Spain started vaccinating that age group immediately. The UK waited until September, when schools had already reopened.

child struggling to breathe. And what if he'd got long COVID?

Issue: Children suffered lockdowns, etc., but adults didn't then wait until the children were safe before opening up.

Question: Did we miss some people when we decided who was vulnerable and who wasn't?

#### Catriona Glas GP

So many of my patients were vulnerable or shielding – not just the over 80s.

Things that made people more at risk were heart disease, kidney disease, pregnancy, diabetes, asthma, severe obesity, neurological conditions such as multiple sclerosis, or if their immune system wasn't working. Some otherwise healthy people have gene variants that made them get very ill with COVID. And being biologically male is a risk factor, even though we're not sure why.

**Fact:** At the start of the pandemic, about 24% of the UK population were at risk due to at least one underlying health condition; that is 8% of school-aged children, 20% of working-aged adults, and 66% of people aged 70 years or more. That's 18.5 million people altogether.

**Issue:** It wasn't just one or two people at risk because of pre-existing conditions It was over a quarter of the entire UK population!

**Question:** Doesn't humanity mean that sometimes we make sacrifices for the good of everyone?

I feel really angry on behalf of children and young people. Studies show that in the main, young people were complying with all the restrictions. And yet the media and politicians still painted us as irresponsible and selfish, even if they were not complying with the rules themselves. We know now that COVID is airborne, yet we were always sanitising our hands and wiping surfaces. What was done by the government to protect students? Making masks mandatory? Improving ventilation in schools? Not enough.

**Fact:** In October 2020, Germany invested £452 million in improving ventilation systems in public buildings, including schools.

**Issue:** Many people chose not to wear a mask because they thought they didn't need it. But wearing a mask protects others from the wearer, rather than the wearer from others.

**Question:** If young people could vote, would the government have pointed the finger at us?

#### Dave Saunders Secondary Teacher

We have no idea of the long term effects of this massive disruption to education. Nobody's done the experiment before. You can't really lock children in a cupboard for two years to see what will happen! But we can see that the attainment gap between the richest and poorest has widened. Social mobility charity, the Sutton Trust, estimate that lost learning could cost the most disadvantaged students a year in lost earnings over their lifetime.

**Fact:** On standardised tests in Summer 2021, secondary students on average had lost 1.8 months of learning compared to previous years. Students from less wealthy areas, though, averaged nearly 4 months learning loss.

**Issue:** Private schools had lots of live online lessons. Many state school students had less access to devices, data, and a private space to study.

**Question:** How are we going to help children and young people catch up? Especially the most disadvantaged.

#### Chloe Mornington Nursery teacher

I think it has been SO HARD for children and young people. Especially the pre-school children I work with, who were too young to understand. Kids go through stages and I worry it's interrupted their development – they might struggle to recover after being cut off from other kids at a sensitive time. But it is hard working with little kids. They put EVERYTHING in their mouths. I go home coated in saliva every day, and in the pandemic that made me worry. We didn't get gloves. It was hard to know what was best to do.

**Fact:** Results for pre-school children haven't been analysed yet, but primary-aged children showed more learning loss, whilst secondary-aged students suffered more from anxiety because of lockdowns.

**Issue:** Young children could have been a vector for transmitting COVID to older and more vulnerable people.

**Question:** Was it better to send pre-school children to nursery or keep them at home?

## "Were all groups treated fairly during the pandemic?"

Note: Discussing the COVID-19 pandemic may be distressing for some of your students. It may be helpful to inform your class in advance that offer them the chance to discuss any concerns with you in advance. they will be discussing the pandemic the following week. You could

Please use the enclosed Support notes to help you deal with difficult issues that might come up during the session.

## Lesson plan

The different 'rounds' of the debate help students think through the issues and reconsider their opinions. The structure also shows them how to build a discussion and back up their opinions with facts.

other members of your wider family cope? Parents? Grandparents? How do you think it was for other people? Did healthcare workers, office workers, supermarket staff, delivery drivers, farmers have a similar experience? Or did we all have a different experience? Some of us had to cope with difficult and distressing situations What were your experiences of the lockdowns? How did How do you think it differed for different groups of people?

# Main Activity: 35 minutes

- 1) Split students into as many groups as characters you want to cover.
- 2) Give them their character cards one per group, and give
- What are the class's initial thoughts? Is there one position they 3) Get one student in each group to read out their first section them a few minutes to read them over. to the rest of the class.
  - 4) Take it in turn to read out their fact. Does it change the way identify with or reject?
    - Read the issue. Any different feelings? they think?
- 6) Each team asks their question to the character of their choice.

Support: To help students you can put the following prompt

... were treated unfairly because. sentences up on the board "I think

.. is the most important point to think about." "I think

# Plenary: 10 minutes

Vote for which position they agree with most (if there is one). Why? Which arguments were the most persuasive? Note - Pupils can stay in roles all the way through debate, or only for the first round if you prefer. If it's all the way through, give them a chance to express their own opinion at the end and in the plenary.

This kit has been researched and fact-checked at the time of printing in February 2022. Research on COVID-19 and the impact of pandemic prevention measures

is on-going and being updated regularly.

# Following precautions

'Compliance" to lockdown precautions was measured by looking at mask wearing, hand washing, mixing, and social distancing. Generally, people either complied with everything or nothing. Young adult men were identified as the group least likely to comply.
